ADS - A software store using BST

Cătălin Chiriță

May 2020

1 Introduction

This project was fun i got to make a store. At first i started by researching how to solve this and how should a store software should look like.

2 The Algorithm

"Look at this graph"

- This is what Chad Kroeger of Nickleback was screaming at me while he was hitting me with a keyboard telling me i should do this project

Made it in CLion with the indians that resonates with my hearth. In the end i solved the problem by using 2 of classes. I left more comments in the code to show you what i did.

3 Conclusion

This was rather fun project to do. I hope my solution is satisfying at least.
